

What is the preferred solution?

The proposed scheme can be divided into 4 distinct areas:-

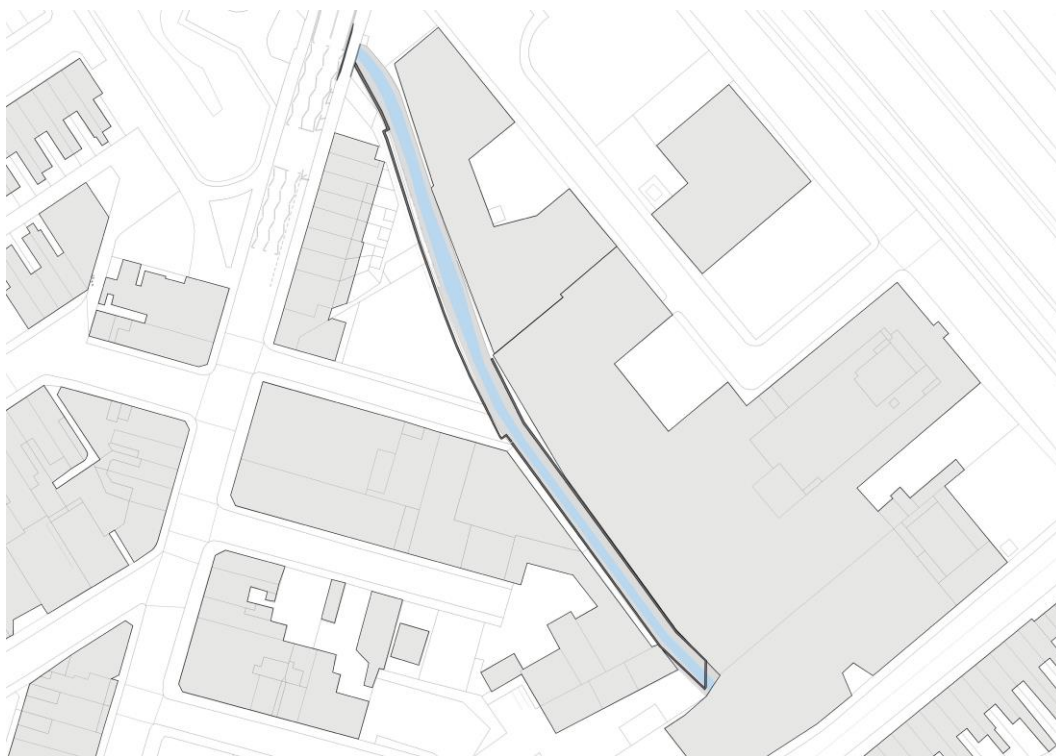

Site 1:

Raised flood defences around the existing watercourse between Shelton Old Road and Liverpool Road.

Sites 2 & 3:

Raised flood defences on top of the existing channel between Liverpool Road and Elenora Street including works to the existing bridge parapet at Liverpool Road.

Site 4:

Raised flood defences in addition to greater capacity through creation of a new channel to replace the existing channel. This also generates significant environmental improvements.
